SUMMARY

Cybersecurity and Criminology student at the University of Technology Sydney (UTS) with hands-on experience developing cybersecurity projects and building technical skills across network security, system administration, and digital investigations. Proficient in Python, Java, Bash scripting, networking fundamentals, Linux environments, and cybersecurity principles, with practical experience using Kali Linux, virtualised lab environments, GitHub, and security-focused tooling.

Experienced in analysing security events, identifying vulnerabilities, developing automation scripts, and documenting technical findings through project-based work. Strong foundation in risk management, cybercrime, security operations, and investigative methodologies, supported by professional experience in security operations, customer support, administration, and stakeholder engagement. Passionate about applying technical and analytical skills to cybersecurity, threat analysis, digital investigations, and security-focused technology roles.

LICENSES & CERTIFICATIONS

Google Professional Cybersecurity Certificate – Includes Linux, MySQL, and Python hands-on labs

Google • Completed in Jun 2025

CompTIA Security+ Certification

CompTIA • Pursuing

Microsoft: Azure Security Engineer Associate

Microsoft • Pursuing

EDUCATION

University of Technology, Sydney (UTS)

Bachelor of Cybersecurity / Bachelor of Criminology • Information Technology and Law • 2024 - 2027

- Developing knowledge across cybersecurity, networking, digital investigations, cyber threat intelligence, and criminological theory.
- Gaining practical experience in Python, Java, Bash, network security, risk management, and incident response.
- Combining technical and analytical skills to understand modern cyber threats, cybercrime, and security challenges.

Australian International Academy, Strathfield

HSC • 2022 - 2023

- Successfully completed the HSC, demonstrating determination, perseverance, and strong time management skills while navigating the challenges of senior secondary education.

PROJECTS

Home Lab

Built Custom PC from scratch – Virtual Machines (Ubuntu, Kali Linux) – Network Setup - Set up DNS server - Set up a Home NAS (Used as a Home Cloud and VM Host)

Personal Website

Website developed using HTML and CSS (Started as a University Assessment, progressed to be my own personal website) – Covers my Aspires, Projects in Detail, Education and Experiences

Hands-On Cybersecurity Training Portfolio

Using TryHackMe and Hack the Box to develop skills in Threat Detection, Incident Response, Network Security, Vulnerability Assessment and Ethical Hacking through hands-on labs and real-world scenarios.

Python Network Security Scanner

Engineered a Python-based Network Security Scanner to automate host discovery, port scanning, service enumeration, banner grabbing, and web security header analysis. Leveraged network protocols and security assessment methodologies to identify exposed services and potential attack surfaces while generating structured reports for vulnerability assessment and remediation planning.

Hands-On Cybersecurity Training Portfolio

Engineered a cybersecurity log analysis platform using Python and SQL to identify, classify, and report SQL injection attack attempts within web application logs. Implemented automated detection logic for malicious query patterns, abnormal user input, and known attack signatures to support threat hunting, security monitoring, and incident response activities.

EXPERIENCE

*Sentinel Security Group, **Security Operations Officer***

Aug 2025 – Present

- Operation, servicing and installation security surveillance systems, alarm platforms, motion detection technologies, and access control systems to identify and respond to security threats.
- Analyse security alerts and suspicious activity, conducting preliminary investigations and escalating incidents where required.
- Apply risk assessment methodologies to evaluate threats, vulnerabilities, and potential impacts to personnel, assets, and operations.
- Produce detailed incident reports, event logs, and operational documentation to support compliance and security investigations.
- Leverage investigative, analytical, and monitoring skills directly applicable to Security Operations Centre (SOC) and cybersecurity environments.
- Coordinate responses to security incidents while maintaining adherence to organisational policies and procedures.

*Harvey Norman @ Domayne, **Technology Consultant***

2024 – 2025

- Provided technical consultation on computer hardware, networking equipment, peripherals, mobile devices, and consumer technology solutions.
- Maintained inventory integrity, asset accountability, and stock management processes across a large technology product portfolio.
- Developed strong technical knowledge of computing systems, networking fundamentals, operating systems, and emerging technologies.
- Leveraged analytical problem-solving and troubleshooting skills to assist customers with technical product enquiries.
- Assisted customers with product information and tailored recommendations to support sales and service outcomes.

*Clicktime Pty, **Customer Support and Operations Coordinator***

2022 - 2023

- Managed inbound support requests through email and telephone channels, prioritising incidents based on business impact, urgency, and operational risk.
- Performed issue triage, documentation management, and escalation coordination to ensure efficient resolution workflows.
- Maintained accurate records, operational documentation, and administrative data while ensuring confidentiality and information integrity.
- Coordinated communication between stakeholders, management, and clients to support business operations and service delivery
- Developed skills directly applicable to IT support, service desk operations, incident management, and stakeholder engagement

*GSS Services P/L, Sydney, **Operations and Asset Support Assistant***

2022 - 2022

- Managed organisational assets, equipment inventories, and operational resources to support business continuity and workforce productivity
- Conducted routine inspections to ensure equipment availability, operational readiness, and compliance with workplace requirements.
- Supported inventory control and documentation processes through accurate record keeping and asset accountability practices.
- Developed strong attention to detail, process compliance, and operational risk awareness within a structured environment.
- Applied organisational and logistical planning skills to support efficient operational workflows.
